AMENDMENTS TO THE CLAIMS

The following listing of claims replaces all prior version and listing of claims

pending in this application.

1-8. (Canceled)

9. (Currently Amended) A method for the manufacture of a copper

microalloy containing lead, comprising:

(a) mixing a copper alloy containing consisting essentially of S, Se,

As, Sb, Bi, Sn, Zn, Ni, Fe, Ag, or Te impurities in amounts of the order of tens of weight ppm

with lead to yield a microalloy having at least 200 weight ppm of lead, wherein the copper alloy

contains Zn, Fe, Ni, Sn, and Ag impurities in amounts of the order of tens of weight ppm;

continuous casting the microalloy from step (a); and (b)

heating the miroalloy from step (b) at 550-650° C for 5-600 (c)

seconds to decrease its half-softening temperature, annealing temperature, and recrystallization

temperature to below 200° C.

(Previously Presented) The method of claim 9, wherein the microalloy has 10.

a lead content of more than 300 weight ppm.

11. (Previously Presented) The method of claim 9, wherein the microalloy has

a lead content of more than 350 weight ppm.

Docket No.: 02136/000G684-US0

Serial No.: 09/499,207

- 2 -

12. (Previously Presented) The method of claim 9, wherein the hydrogen

content of the microalloy is 0.5-0.7 weight ppm after casting.

13. (Canceled)

14. (Previously Presented) The method of claim 9, whereby the electrical

conductivity of the microalloy is increased to values greater than 101% IACS.

(Previously Presented) A method for the manufacture of a copper 15.

microalloy comprising:

mixing a copper alloy consisting essentially of copper and one or (a)

more of S, Se, As, Sb, Bi, Sn, Zn, Ni, Fe, Ag and Te impurities in amounts of the order of tens of

weight ppm, with lead to yield a microalloy having a final concentration of at least 200 weight

ppm of lead, wherein the copper alloy contains Zn, Fe, Ni, Sn, and Ag impurities in amounts of

the order of tens of weight ppm; and

continuous casting the microalloy. (b)

(Canceled) 16.

17. (Previously Presented) The method of claim 15, wherein the microalloy

has a lead content of more than 300 weight ppm.

Docket No.: 02136/000G684-US0

Serial No.: 09/499,207

18. (Previously Presented) The method of claim 15, wherein the microalloy

has a lead content of more than 350 weight ppm.

19. (Previously Presented) A method for the manufacture of a copper

microalloy comprising:

(a) mixing a copper alloy consisting of copper and one or more of S,

Se, As, Sb, Bi, Sn, Zn, Ni, Fe, Ag and Te impurities in amounts of the order of tens of weight

ppm, with lead to yield a microalloy having a final concentration of at least 200 weight ppm of

lead, wherein the copper alloy contains Zn, Fe, Ni, Sn, and Ag impurities in amounts of the order

of tens of weight ppm; and

(b) continuous casting the microalloy.

20. (Canceled)

21. (Previously Presented) The method of claim 19, wherein the microalloy

has a lead content of more than 300 weight ppm.

22. (Previously Presented) The method of claim 19, wherein the microalloy

has a lead content of more than 350 weight ppm.

Docket No.: 02136/000G684-US0

23. (New) A method for the manufacture of a copper microalloy comprising:

(a) mixing a copper alloy consisting essentially of copper and one or

more of S, Se, As, Sb, Bi, Sn, Zn, Ni, Fe, Ag and Te impurities in amounts of the order of tens of

weight ppm, with lead to yield a microalloy having a final concentration of at least 200 weight

ppm of lead, wherein the copper alloy contains Zn, Fe, Ni, Sn, and Ag impurities in amounts of

the order of tens of weight ppm; and

(b) continuous casting the microalloy,

wherein the copper microalloy has an electrical conductivity of greater than 101% IACS.
